

Luis Alberto Antonio Narcizo

QA ENGINEER | AI PRODUCT VALIDATION |
AUTOMOTIVE HIL

Phone: 5584577590

Email: narcizo1516@gmail.com

Location: Miguel Hidalgo, Mexico City, Mexico

Languages: Spanish native | English technical communication

Target roles: QA Analyst, QA Engineer, Manual QA, AI QA Tester

- Functional QA
- Regression Testing
- Google Ads Workflows
- AI / Agentic Testing

PROFESSIONAL PROFILE

QA professional with an Electronics Engineering background and experience in functional testing, regression execution, AI-assisted product validation, test evidence documentation, defect analysis, and QA knowledge organization. Current work focuses on validating digital product experiences within Google Ads-related workflows, including conversational guidance, campaign recommendations, expected behavior alignment, and product stability. Previous background includes automotive HIL validation for Ford-related environments and engineering support in industrial systems.

VALUE PROPOSITION

Positioning: I combine manual QA execution, AI behavior validation, structured documentation, engineering reasoning, and visual communication to improve product quality, reduce ambiguity in test results, and make complex QA knowledge easier to understand for teams, stakeholders, and new testers.

CORE QA STRENGTHS

FUNCTIONAL AND REGRESSION QA

Execution of manual test cases, regression cycles, expected vs actual analysis, defect identification, screenshots, reproduction steps, and test result classification.

AI PRODUCT VALIDATION

Evaluation of AI-driven recommendations, conversational flows, user guidance, consistency, safety boundaries, and alignment with product expectations.

GOOGLE ADS WORKFLOW TESTING

Validation of Search, Performance Max, Demand Gen, Ad Strength, Smart Bidding, targeting, budgets, keywords, assets, and campaign recommendation scenarios.

QA DOCUMENTATION AND TRACEABILITY

Creation of HTML reports, regression guides, risk matrices, QA knowledge bases, onboarding material, and visual product-flow documentation.

TECHNICAL COMPETENCY MAP

SELECTED KEYWORDS FOR ATS

- Manual Testing
- Functional Testing
- Regression Testing
- Exploratory Testing
- Test Cases
- Bug Reporting
- Defect Analysis
- Expected vs Actual
- Risk-Based Testing
- Google Ads
- AI Testing
- HIL Validation
- HTML/CSS
- Python
- JavaScript
- Jira
- TestRail
- Scrum

CURRENT PROFESSIONAL EXPERIENCE

QA Tester / AI Product Validation - Google Ads Ecosystem

2024 - Present

Google-related project | Current role

- Execute manual functional tests and regression scenarios for digital advertising workflows, product recommendations, guided experiences, and user-facing assistant behavior.
 - Validate test cases related to Search, Performance Max, Demand Gen, Ad Strength, Smart Bidding, budgets, targeting, keywords, assets, and campaign recommendation scenarios.
 - Analyze expected behavior vs actual behavior, classifying outcomes as pass, fail, partial pass, blocked, or requiring manual review.
 - Evaluate AI-assisted flows by reviewing conversational quality, usefulness of recommendations, adherence to expected criteria, contextual consistency, and inappropriate recommendation avoidance.
 - Document defects with clear reproduction steps, visual evidence, impact explanation, and severity-oriented reasoning.
 - Support product stability through recurring regression checks, scenario re-execution, and validation of fixes or behavioral changes.
- Confidentiality note: this CV intentionally describes work at a product-capability level and excludes internal IDs, private tooling details, customer data, screenshots, unreleased product information, and confidential implementation specifics.

GOOGLE QA SCOPE - PUBLIC-LEVEL DESCRIPTION

PRODUCT AREAS

- Marketing Advisor workflows
- Connect Sales validation
- Google Ads user journeys
- Campaign recommendation flows

VALIDATION TYPES

- Manual functional testing
- Regression testing
- Conversational AI validation
- Risk-based scenario review

QA OUTPUTS

- Evidence and findings
- Bug-ready documentation
- Execution summaries
- HTML-based QA reports

REPRESENTATIVE QA RESPONSIBILITIES

TEST EXECUTION

- Executed scripted and semi-guided test cases for advertising workflows.
- Validated whether the assistant asked the correct follow-up questions or provided the expected next step.
- Checked user flows across campaign setup, recommendations, assets, targeting, bidding, and optimization topics.
- Repeated scenarios to confirm stability, reproducibility, and alignment with expected behavior.

EVIDENCE AND DEFECT ANALYSIS

- Captured screenshots and execution notes to support pass/fail decisions.
- Wrote concise explanations for failure causes, blockers, or unclear behavior.
- Separated tester execution issues from product behavior issues.
- Prioritized findings according to functional impact and user-facing risk.

AI / AGENTIC BEHAVIOR REVIEW

- Assessed if the assistant followed product intent without overreaching.
- Validated recommendation quality, safety, relevance, and contextual continuity.
- Detected excessive questioning, weak guidance, missing recommendations, or misaligned outputs.
- Reviewed new-user and returning-flow behavior to avoid incorrect assumptions.

DOCUMENTATION AND KNOWLEDGE TRANSFER

- Built structured QA references for test cases, flows, risk, impact, and execution logic.
- Created HTML reports and visual documentation to improve reviewability.
- Supported onboarding by organizing product knowledge and execution patterns.
- Contributed to QA planning, regression guides, and traceability-oriented material.

IMPACT-ORIENTED HIGHLIGHTS

PRIORITIZED ANALYSIS

PREVIOUS PROFESSIONAL EXPERIENCE

QA / Validation Engineer - Automotive HIL Environment

Previous role

Ford GTBC-related automotive validation experience

- Participated in automotive validation activities involving HIL environments, component-level testing, and requirements-based verification.
- Worked with validation logic related to IPC, signal behavior, temperature units, indicators, simulated inputs, and test evidence generation.
- Supported test execution, issue identification, evidence recording, and communication of abnormal behavior to technical stakeholders.
- Applied engineering reasoning to verify expected system behavior under controlled test scenarios.

Engineering, Warranty and Customer Support Roles

Previous experience

Termiz / Cleaver Brooks

- Supported engineering and warranty-related processes for industrial systems, including technical follow-up, documentation, and customer-oriented resolution.
- Collaborated with engineering teams to review technical cases, organize information, and support operational continuity.
- Developed communication, problem-solving, and documentation skills applicable to QA, defect triage, and stakeholder management.

Technical Scholar / Institutional Repository Support

Previous experience

CONACYT / UAM Lerma

- Contributed to technical and documentation activities for an institutional repository initiative.
- Supported organization, validation, and structuring of information in academic/technical environments.

QA DOCUMENTATION AND PRODUCT KNOWLEDGE PROJECTS

Interactive QA Knowledge Platform

Designed and structured an HTML-based platform to organize test cases, product flows, modules, risk areas, expected behavior, execution notes, and visual QA logic for easier review and onboarding.

Test Execution Reports

Created structured execution reports with steps, observations, expected vs actual results, evidence references, pass/fail reasoning, and concise defect explanations.

Risk and Traceability Material

Organized test cases by risk, module, impact, execution complexity, and regression value to support clearer QA prioritization.

EDUCATIONAL AND COMMUNITY LEADERSHIP

EDUCATIONAL ROBOTICS INSTRUCTOR

Designed hands-on robotics and computational thinking activities for children, using project-based learning, Scratch, basic programming, teamwork, logic, and STEAM methods.

ACADEMIC SUPPORT AND TUTORING

Provided tutoring in reading comprehension, mathematics, logic, science, and study skills, adapting content to different learning paces and student needs.

TRANSFERABLE LEADERSHIP SKILLS

Mentoring

Knowledge Transfer

Workshop Design

Stakeholder Communication

Process Organization

Visual Documentation

Analytical Thinking

Community Projects

EDUCATION

BACHELOR'S DEGREE IN ELECTRONICS ENGINEERING

Universidad Autonoma Metropolitana (UAM), Mexico. Engineering foundation in electronics, systems reasoning, technical analysis, and applied problem solving.

TECHNICAL COMPUTER SCIENCE BACKGROUND

Technical education in computer science from Colegio de Estudios Cientificos y Tecnologicos del Estado de Veracruz, Plantel Tres Valles.

CERTIFICATIONS, COURSES AND TECHNICAL TRAINING

QA AND TESTING

- ISTQB Certified Tester Foundation Level (CTFL)
- Advanced Test Automation and API Testing specializations - in progress
- Software testing foundations, test design, defect analysis, and regression practices

PROGRAMMING AND WEB

- Python, Java, JavaScript, HTML and CSS
- Selenium WebDriver, Playwright, CodeceptJS, Mocha, Node.js
- Git, CI/CD concepts, Jenkins, Maven, JUnit and TestNG familiarity

ENGINEERING AND TECHNOLOGY

- DSPACE 5.8 user-level training
- Cloud Computing course
- Business Intelligence course
- Swift training by Big Nerd Ranch at Apple Santa Fe

LEADERSHIP AND ACADEMIC PARTICIPATION

- Coordinator of the X Semana de Ingenieria Recreativa organizing committee
- Divisional Council representative for Engineering and Computing programs
- Speaker in university outreach activities

TOOLS AND TECHNOLOGIES

QA TOOLS

Jira, TestRail, test case repositories, bug tracking, evidence documentation, regression guides, execution reports.

AUTOMATION AND CODE

Python, JavaScript, Java, HTML/CSS, Selenium, Playwright, Node.js, Mocha, CodeceptJS, Git.

ENGINEERING TOOLS

MATLAB, DSPACE, CircuitLab, Eclipse, Arduino/Raspberry Pi concepts, electronics and HIL environments.

LANGUAGES AND PROFESSIONAL SKILLS

LANGUAGES

- Spanish - Native
- English - Professional working proficiency for technical QA communication, documentation, and product validation contexts

PROFESSIONAL SKILLS

- Analytical thinking, structured communication, evidence-based reasoning, ownership, organization, leadership, patience, adaptability, documentation discipline, and visual explanation of complex workflows.

EXECUTIVE CONTRIBUTION SUMMARY

What I bring to a QA team: disciplined manual testing, AI behavior evaluation, engineering judgment, clear defect communication, strong documentation habits, visual organization of product knowledge, and the ability to connect technical findings with business and user impact.
